"On June 11, 2019 the subcommittee met at the property and determined that the rail of the roof deck was significantly visible. The Commissioners requested for the existing wood rail to be changed to a simple black metal rail, and that the roof deck rail is pushed back a minimum of one foot in order to further reduce the visibility. The commission stated that either the platform or rail could be pushed back. Additionally, the fascia board is to be made from solid wood, and painted black. The Commission stressed that the ultimate objective of these small incremental changes is to, over time, lead to the complete elimination of the visibility of the roof deck from West Springfield Street."
